Reconceptualizing Early Mathematics Learning - Lyn D. English 2013-05-09

This book emanated primarily from concerns that the mathematical capabilities of young children continue to receive inadequate attention in both the research and instructional arenas. Research over many years has revealed that young children have sophisticated mathematical minds and a natural eagerness to engage in a range of mathematical activities. As the chapters in this book attest, current research is showing that young children are developing complex mathematical knowledge and abstract reasoning a good deal earlier than previously thought. A range of studies in prior to school and early school settings indicate that young learners do possess cognitive capacities which, with appropriately designed and implemented learning experiences, can enable forms of reasoning not typically seen in the early years. Although there is a large and coherent body of research on individual content domains such as counting and arithmetic, there have been remarkably few studies that have attempted to describe characteristics of structural development in young students' mathematics. Collectively, the chapters highlight the importance of providing more exciting, relevant, and challenging 21st century mathematics learning for our young students. The chapters provide a broad scope in their topics and approaches to advancing young children's mathematical learning. They incorporate studies that highlight the importance of pattern and structure across the curriculum, studies that target particular content such as statistics, early algebra, and beginning number, and studies that consider how technology and other tools can facilitate early mathematical development. Reconceptualising the professional learning of teachers in promoting young children's mathematics, including a consideration of the role of play, is also addressed.

Critical Literacies and Young Learners - Ken Winograd 2014-11-13

Many pre-service and beginning early childhood teachers question if critical literacy is do-able with young children, particularly in the current top-down educational climate. *Critical Literacies and Young Learners* shows how it is possible, even in the context of the mandates and pressures so many teachers experience, and honors the sophisticated and complex social theorists that young children are. Featuring a mix of groundbreaking work by iconic researchers and teachers and original contributions by emerging scholars and educators in the field, the text illustrates a range of approaches to doing critical literacy with young children and, at the same time, addresses the Common Core Standards. Part I provides several orienting frameworks on critical literacy, giving specific attention to its relationship to the Common Core Standards. Part II features chapters describing critical literacy in practice, grouped in 4 thematic clusters: using texts from popular culture and everyday life; focusing on issues-oriented texts and cultural identity; functional linguistic analysis of texts; interdisciplinary that engage young learners in critical social action projects. Part III addresses the micro-political contexts of teaching critical literacy.
