Interaction Between Compilers and Computer Architectures - Gyungho Lee 2013-03-14

Effective compilers allow for a more efficient execution of application programs for a given computer architecture, while well-conceived architectural features can support more effective compiler optimization

techniques. A well thought-out strategy of trade-offs between compilers and computer architectures is the key to the successful designing of highly efficient and effective computer systems. From embedded micro-controllers to large-scale multiprocessor systems, it is important to understand the interaction between compilers and computer architectures. The goal of the Annual Workshop on Interaction between Compilers and Computer Architectures (INTERACT) is to promote new ideas and to present recent developments in compiler techniques and computer architectures that enhance each other's capabilities and performance. Interaction Between Compilers and Computer Architectures is an updated and revised volume consisting of seven papers originally presented at the Fifth Workshop on Interaction between Compilers and Computer Architectures (INTERACT-5), which was held in conjunction with the IEEE HPCA-7 in Monterrey, Mexico

Deregulating Property-Liability Insurance - J. David Cummins 2004-06-23

Over the past two decades, the United States has successfully deregulated prices and restrictions on most previously-regulated industries, including airlines, trucking, railroads, telecommunications, and banking. Only a few industries remain regulated, the largest being the property-liability insurance business. In light of recent sweeping financial modernization legislation in other sectors of the insurance industry, this timely volume examines the basis for continued regulation of rates and forms of the U.S. property-liability insurance market. The book focuses on private passenger automobile insurance—the most important personal line of property-liability coverage, with annual premiums of about \$120 billion. The authors analyze five state case studies:

California, Massachusetts, and New Jersey—three of the most heavily regulated states—as well as Illinois, which has been deregulated for about 30 years, and South Carolina, which began to deregulate in 1997.

The study also includes an econometric analysis based on all fifty states over a 25-year period that gauges the impact of regulation on insurance price levels, price volatility, and the proportion of automobiles insured in residual markets. The authors conclude that regulation does not significantly reduce long-run prices for consumers, and generally limits availability of coverage, reduces the quality and variety of services available in the market, inhibits productivity growth, and increases price volatility.

Heart of Glass - Daniel Spurr
2000

The fascinating story of fiberglass boats and the mavericks who dreamed them. Nine out of ten sailors today own sturdy, often beautiful fiberglass craft. Fiberglass brought boating to the non-rich, but the history of that revolution has never been told. Daniel Spurr rectifies this omission with his highly readable and affectionate account of the fiberglass boat, from its earliest incarnation in World War II to the present day. In the early days, when shoestring genius was unfettered by industrial

efficiency, there were boats with tailfins, boats baked in ovens, and boats designed to be dropped from planes. The voyage from those first ugly ducklings to the graceful boats of the 1990s makes a riveting adventure of triumph and ruin. Along the way, Spurr profiles landmark designs that now set the standards in the used-boat market, and he portrays the revolution in human terms, introducing us to the vivid personalities who invented--often in their garages and rarely at a profit--the world of boating we know today.

Improving Health in the

Community - Committee on Using Performance Monitoring to Improve Community Health 1997-05-05

How do communities protect and improve the health of their populations? Health care is part of the answer but so are environmental protections, social and educational services, adequate nutrition, and a host of other activities. With concern over funding constraints, making sure such activities are efficient and effective is becoming a high priority. Improving Health in the Community explains how population-based performance monitoring programs can help communities point their efforts in the right direction. Within a broad definition of community health, the committee addresses factors surrounding the implementation of performance monitoring and explores the "why" and "how to" of establishing mechanisms to monitor the performance of those who can influence community health. The book offers a policy framework, applies a multidimensional

model of the determinants of health, and provides sets of prototype performance indicators for specific health issues. Improving Health in the Community presents an attainable vision of a process that can achieve community-wide health benefits.
