Advances in Cryogenic Engineering Materials - A. F. Clark
2012-12-06

The Third International Cryogenic Materials Conference (ICMC) was held in Madison, Wisconsin, in conjunction with the Cryogenic Engineering Conference (CEC) in August 1979. The University of Wisconsin hosted the two conferences in an excellent manner and deserves special recognition and praise. The synergism produced by conducting the two conferences simultaneously continues to be strong. Materials remain a demanding challenge and, in some cases, an obstacle to effective application of cryogenic technology. The association of materials specialists and cryogenic engineers every other year centers their attention on the most needed areas of research. The present ICMC Board met during the conference and elected two new members, E. W. Collings (U. S.) and D. Evans (England). The board voted to conduct two smaller, special-topic conferences in 1980. These are Filamentary A15 Superconductors, which was held at Brookhaven National Laboratories, Upton, New York in May 1980, and Fundamentals of Nonmetallics and Composites at Low Temperatures, held in Geneva, Switzerland in August 1980. The 1981 CEC/ICMC will be held August 10 through 14 in San Diego, California.

Filamentary A15 Superconductors - Masaki Suenaga 2013-03-08

Compound superconductors with the A15 structure carry the promise of the second generation in practical superconductivity. They will provide higher operating magnetic fields at higher temperatures than the preceding alloy superconductors. To fulfill this promise, their brittle nature must be accommodated in a filamentary structure. Achieving this has been no simple task and imaginative research and clever production techniques have led to many usable conductor configurations. In addition, several new and exciting possibilities are being proposed; for example, in situ processing promises easier production with improved strain tolerance. It is timely, therefore, to take measure of what we have achieved and to assess our understanding so that we may choose, with some confidence, paths for future research and potential applications. To meet these needs, the International Cryogenic Materials Conference Board has sponsored this special topic conference on Filamentary A15 Superconductors bringing together superconductivity researchers, superconducting wire producers, and high field magnet users to discuss current research problems. That the information exchange was intensive

and successful is evidenced by the excellent papers in this volume. In order to capture some of the synergistic wisdom generated in discussions at the conference several people were asked to assemble and interpret the comments and concerns of the fusion, high energy physics, solid state physics, and metallurgy groups.
