Finding Carla - Ross Nixon 2016

"In March of 1967, single-engine private pilot Alvin Oien, Sr. crashed his Cessna 195 in the mountains of Northern California, with passengers Phyllis (his wife) and Carla (his stepdaughter) after he hit unexpectedly worsening weather with fast ice-buildup on his wings. They all survived the crash due to Al's skillful and lucky handling but the icing caused him to spin out of control and fly far off course. He hard-landed near the summit of a remote mountain peak and the three of them were badly injured. Before 1968, there was no thought of any requirement for airplanes to contain emergency locator transmitters. Because of the multiple negative factors of the blizzard conditions, incredibly rough terrain and zero visibility, the search and rescue efforts failed as there was no 'ELT' onboard to pinpoint them. The ELT Beacon law, finally signed into the regulations in 1970 as a rider to the OSHA bill, could well be called Carla's Law. When the details of the 'Carla Corbus accident'--the story told in this book--made headline news when they were finally found 6 months later, along with a 'diary' that Phyllis and Carla kept (which was transcribed in part and published months after that), it was the shock that broke all political resistance to making such a law. This is a flying story as well as a life story. In retelling it, the hope is that the messages of this book spread through the aviation world and beyond, cause people to think about what is important in flying and life. The Oien Family's sacrifice in this needs to be remembered...in this story"--Provided by publisher.

Aeronautical Information Manual - U. S. Department Transportation 2017-08-03

The Federal Aviation Administration is responsible for insuring the safe, efficient, and secure use of the Nation's airspace, by military as well as civil aviation, for promoting safety in air commerce, for encouraging and developing civil aeronautics, including new aviation technology, and for supporting the

requirements of national defense. The activities required to carry out these responsibilities include: safety regulations; airspace management and the establishment, operation, and maintenance of a civil-military common system of air traffic control (ATC) and navigation facilities; research and development in support of the fostering of a national system of airports, promulgation of standards and specifications for civil airports, and administration of Federal grants-in-aid for developing public airports; various joint and cooperative activities with the Department of Defense; and technical assistance (under State Department auspices) to other countries. This manual is designed to provide the aviation community with basic flight information and ATC procedures for use in the National Airspace System (NAS) of the United States. An international version called the Aeronautical Information Publication contains parallel information, as well as specific information on the international airports for use by the international community. This manual contains the fundamentals required in order to fly in the United States NAS. It also contains items of interest to pilots concerning health and medical facts, factors affecting flight safety, a pilot/controller glossary of terms used in the ATC System, and information on safety, accident, and hazard reporting.

Pilot / Controller Glossary (Air Traffic Plans and Publications) - Federal Aviation Administration 2019-11-28

This Glossary was compiled to promote a common understanding of the terms used in the Air Traffic Control system. It includes those terms which are intended for pilot/controller communications. Those terms most frequently used in pilot/controller communications are printed in bold italics. The definitions are primarily defined in an operational sense applicable to both users and operators of the National Airspace System. Use of the Glossary will preclude any misunderstandings concerning the system's design, function, and purpose. Because of the international nature of flying, terms used in the Lexicon, published by the International Civil Aviation Organization (ICAO), are included when they differ from FAA definitions. These terms are followed by "[ICAO]." For the reader's convenience, there are also cross references to related terms in other parts of the Glossary and to other documents, such as the Code of Federal Regulations (CFR) and the Aeronautical Information Manual (AIM).

Private Pilot Airman Certification Standards - Airplane - Federal Aviation Administration (FAA) 2016-09-25

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.
